FOR IMMEDIATE RELEASE:

TECLAB® CREATES A SAFER HIGH-DENSITY STORAGE CABINET

(Kalamazoo, MI) — Teclab's tradition of pioneering innovative storage features spans several decades and continues with the introduction of a high-density storage cabinet designed to increase worker safety and maximize work space. This advanced cabinet uses interlocking slides that allow only one drawer to be opened at a time.

The cabinets come in two heights, 48" and 60", and two widths, 30" and 36" and with over 14 different drawer and door combinations they are designed fit a wide variety of storage requirements. A mobile base can be added to the 48" tall cabinets should tools or small items be needed in many places in the work area.

Teclab's experience and expertise in ESD applications for its technical workstations enable them to offer customers involved in the assembly of sensitive electronic equipment a proven solution to control static electricity. Each drawer can be ESD grounded to ensure product integrity, and each cabinet can connect to the facility's earth-ground system.

Teclab electronic workbenches, scientific lab furniture and custom technical furniture are currently being used by leading universities, laboratories, manufacturing and electronics firms worldwide. For more information, call Teclab toll-free at 800-832-5227, or visit their web site at www.teclab.com.
